CAREER OBJECTIVE

Third-year B.Tech CSE (Data Science) student with hands-on experience in Python-based data analytics and full-stack web development (React, Node.js, PostgreSQL), plus foundational training in AWS cloud and Generative AI. Seeking an internship or entry-level opportunity to build data-driven applications.

EDUCATION

Bachelor of Technology, Computer Science and Engineering (Data Science) 2025 – 2028
Mohan Babu University

Diploma in Computer Science and Engineering Sep 2022 – Jun 2025
Audisankara Institute of Technology, Gudur

EXPERIENCE

Data Analytics Intern | CodeAlpha (Remote) Jun 2026 – Jul 2026

- Completed a one-month virtual Data Analytics internship at CodeAlpha.
- Cleaned, transformed, and analyzed real-world datasets using Python.

PROJECTS

Digital Library System (MBU Digital Library) GitHub
React, Vite, Tailwind CSS, Node.js, Express, PostgreSQL, Prisma

- Built a full-stack student portal for Mohan Babu University with a React frontend and an Express REST API backed by PostgreSQL.
- Implemented role-based access for administrators and students, using JWT sessions in HttpOnly cookies, bcrypt password hashing and owner-scoped authorization.
- Developed modules for library catalog and circulation, subjects and study resources, coding practice, and a private resume and certificate area with PDF uploads.

Book Data Analytics Pipeline (CodeAlpha Internship) Web Scraping · EDA · Data Visualization
Python, Requests, BeautifulSoup, Pandas, NumPy, Matplotlib

- Scraped book titles, prices and ratings from a website with Requests and BeautifulSoup, and exported the data to CSV using Pandas.
- Performed exploratory data analysis: checked dataset shape, missing values and duplicates, cleaned the data and ran statistical analysis with Pandas and NumPy.
- Created bar, histogram, pie, box and line charts with Matplotlib to show rating and price distributions.

IoT-Based Air Quality Monitoring System
ESP32/NodeMCU, MQ-135 sensor, IoT platform

- Designed an IoT-based air quality monitoring system using an ESP32/NodeMCU microcontroller and an MQ-135 gas sensor.
- Shows readings on an LCD or web dashboard and sends data to an IoT platform for remote monitoring, storage and visualization.
- Includes threshold-based alerts for poor air quality, intended for classrooms, laboratories, homes and offices.

CERTIFICATIONS

Introduction to Generative AI | Google | Credential ID: 21796458 Jan 2026
Generative AI by Google Cloud (45-hour course, 22 skill badges) | L4G, Google Skills Feb 2026
AWS Cloud Fundamentals for Complete Beginners (30 hours) | CloudNestor Jun 2026
Data Analytics Virtual Internship | CodeAlpha Jul 2026
Comprehensive DevOps and CI/CD Tools Mastery: From Git to Kubernetes (58 hours) | L&T EduTech

SKILLS

Programming: Python, JavaScript
Data Analytics: Pandas, NumPy, Matplotlib, BeautifulSoup, Requests, Jupyter Notebook, data cleaning, EDA, data visualization
Web Development: React, Vite, Tailwind CSS, Node.js, Express, REST APIs, JWT authentication
Databases: PostgreSQL, Prisma ORM
Cloud, DevOps and AI: AWS cloud fundamentals, DevOps and CI/CD tooling, Generative AI (Google Cloud)
IoT: ESP32/NodeMCU, MQ-135 sensor
Tools: Git, GitHub
